to understand the phenomenon of corrosion it is necessary to know the basic principles of various disciplines like chemistry metallurgy and material science it is also necessary to have elementary knowledge of other branches of engineering in the present system it is difficult to develop a curriculum that would cover all these aspects principles

and prevention of corrosion fulfils these gaps so that the reader would know as to how and why the corrosion takes place it is also useful for practicing engineers as well as design engineers who are concerned about corrosion the book will also help the reader appreciate other works which are devoted to specific topics like cathodic protection protective coatings and experiments techniques in corrosion

the objectives of this book are to give technical information about anodic protection explain how economic analyses are made to determine whether or not it should be used and describe some of the applications and equipment limitations of the technique will be pointed out technological changes that have resulted in higher temperatures pressures and velocities increase corrosion rates and markedly influence materials selection and design decisions continuous cycle systems impose increased demands on system reliability new processes require more sophisticated equipment made of costlier metals which are often in short supply and subject to the vagaries of international commerce the impact of continuing inflation influences decisions related to capital expenditures and maintenance costs some problems caused by these considerations can be solved or solutions simplified by the use of anodic protection technical and scientific information is presented on applications to industrial equipment economics design and installation operation and maintenance electrochemical principles laboratory tests and procedures a historical summary patent list glossary of terms and a subject index are included it is important to acknowledge that much of the information has been from the original work of others including the publications of many friends

this information report is intended to provide automotive engineers with a guide to the principles of corrosion of metals and to methods dealing with its prevention

corrosion prevention and protection practical solutions presents a functional approach to the various forms of corrosion such as uniform corrosion pitting corrosion crevice corrosion galvanic corrosion stress corrosion hydrogen induced damage sulphide stress cracking erosion corrosion and corrosion fatigue in various industrial environments the book is split into two parts the first consisting of five chapters introduction and principles fundamentals of corrosion corrosion testing detection monitoring and failure analysis regulations specifications and safety materials metals alloys steels and plastics corrosion economics and corrosion management the second part of the book consists of two chapters which present a discussion of corrosion reactions media active and active passive corrosion behaviour and the various forms of corrosion a

collection of case histories and practical solutions which span a wide range of industrial problems in a variety of frequently encountered environments including statues monuments corrosion problems in metallurgical and mineral processing plants boilers heat exchangers and cooling towers aluminum and copper alloys galvanized steel structures as well as hydrogeological environmental corrosion this text is relevant to researchers and practitioners engineers and chemists working in corrosion in industry government laboratories and academia it is also suitable as a course text for engineering students as well as libraries related to chemical and chemical engineering institutes and research departments

since its creation in 1884 engineering index has covered virtually every major engineering innovation from around the world it serves as the historical record of virtually every major engineering innovation of the 20th century recent content is a vital resource for current awareness new production information technological forecasting and competitive intelligence the world's most comprehensive interdisciplinary engineering database engineering index contains over 10 7 million records each year over 500 000 new abstracts are added from over 5 000 scholarly journals trade magazines and conference proceedings coverage spans over 175 engineering disciplines from over 80 countries updated weekly

includes monthly abstracts of recent literature relating to non ferrous and ferrous metals

excerpt from recent achievements in the prevention of corrosion with the increasing magnitude and permanence of present day engineering achievements the protection of structures and equipment from deterioration takes on an added importance in this connection the general recognition of the relatively temporary and insecure protection afforded by the conventional red lead and graphite paints makes imperative the use of a corrosion preventive both permanent and dependable a brief consideration of the process of corrosion will make clear the logical method to combat it the consensus of scientific opinion accepts the electrolytic theory which appears to account for all the phenomena and to tally with observation this theory holds all corrosion of steel surfaces for instance to be due to a difference of electric potential between adjacent points this may be caused by the uneven distribution of various components or by the presence of a different metal about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition
